Q 4.1 (a) Image, (c) Date and (e) Email are valid values of type attribute of `<input>` tag

Q 5. A1. The different types of list in HTML5 are:-

1. Ordered list

The `` tag defines an ordered list. An ordered list can be numerical or alphabetical

2. Unordered list

An unordered list created using the `` tag and each item starts with `` tag. The list items in unordered list are marked with bullets

3. Definition list

`<dl>` tag is used to define definition list. Items are created using `<dt>` and `<dd>` tags. The `<dt>` tag is used to define the term and `<dd>` tag is used to define term's definition

4. Nested list

List within another list either order list or unordered list is called nested list

A2 Input restrictions that can be given using `<input>` tag are:-

1. pattern:- Specifies a regular expression to check the input values
2. read only:- Specifies that an input field is read only (that cannot be changed)
